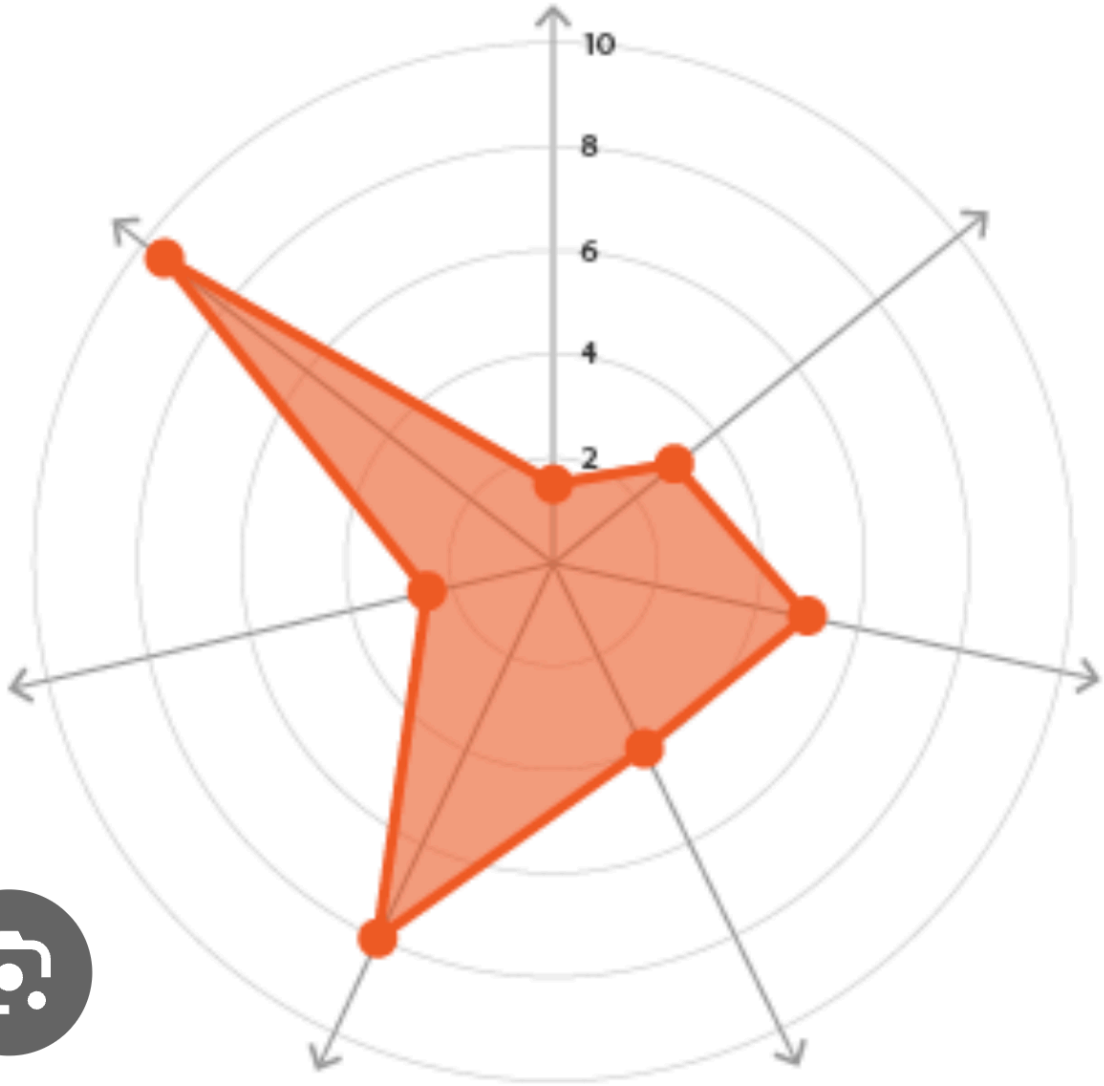
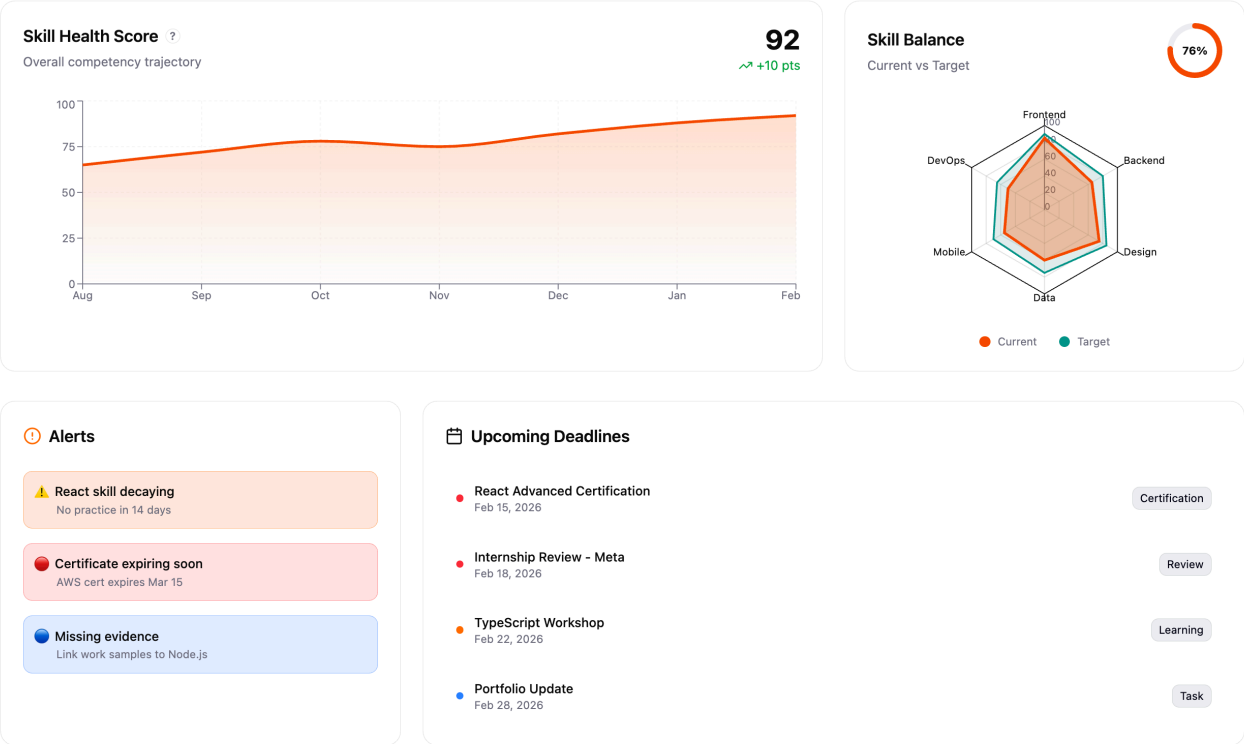
SWE report

1) Skill balance numbers aren’t visible clearly, the borders could be thinner.
Instead you can use the below design, whenever the cursor is hovered over the nodes, it shows the exact no.

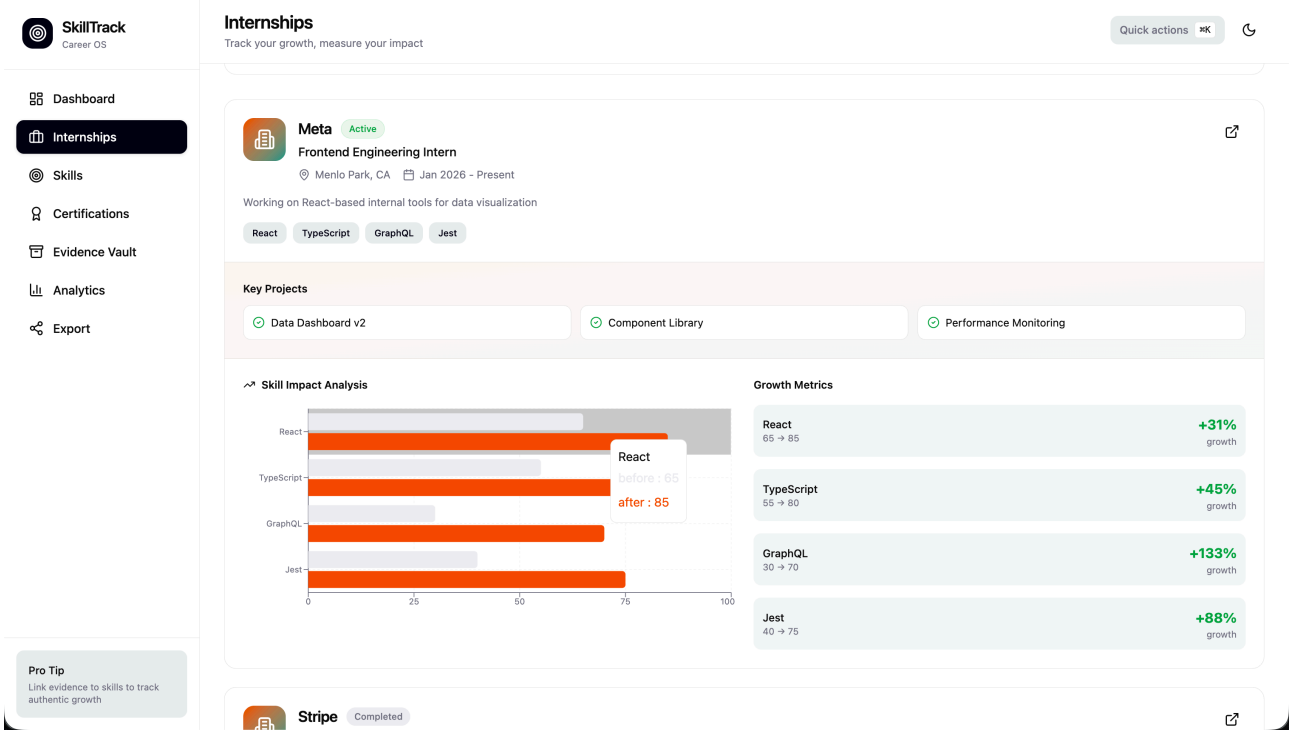


2. Interchange the positions of 3rd row and 4th row, Alerts and upcoming deadlines are more important than stats.



2.

3. In skill impact analysis , the before score is not visible properly



4. In the above design , u can just add three columns for each metric. The growth metrics and key projects designs are elongated for no real purpose. It's more viable if they are compact so that user can comprehend everything without looking too far from respective metric box.

5. Remove the skills growth in internships section.

6. 
6. Remove the extra space for location and duration below the company logo.

7. 
7. Put the info stats at top.

8. 
8. You can make the skills sections horizontal instead of vertical. Which wouldn't waste the space for no real usage purpose.

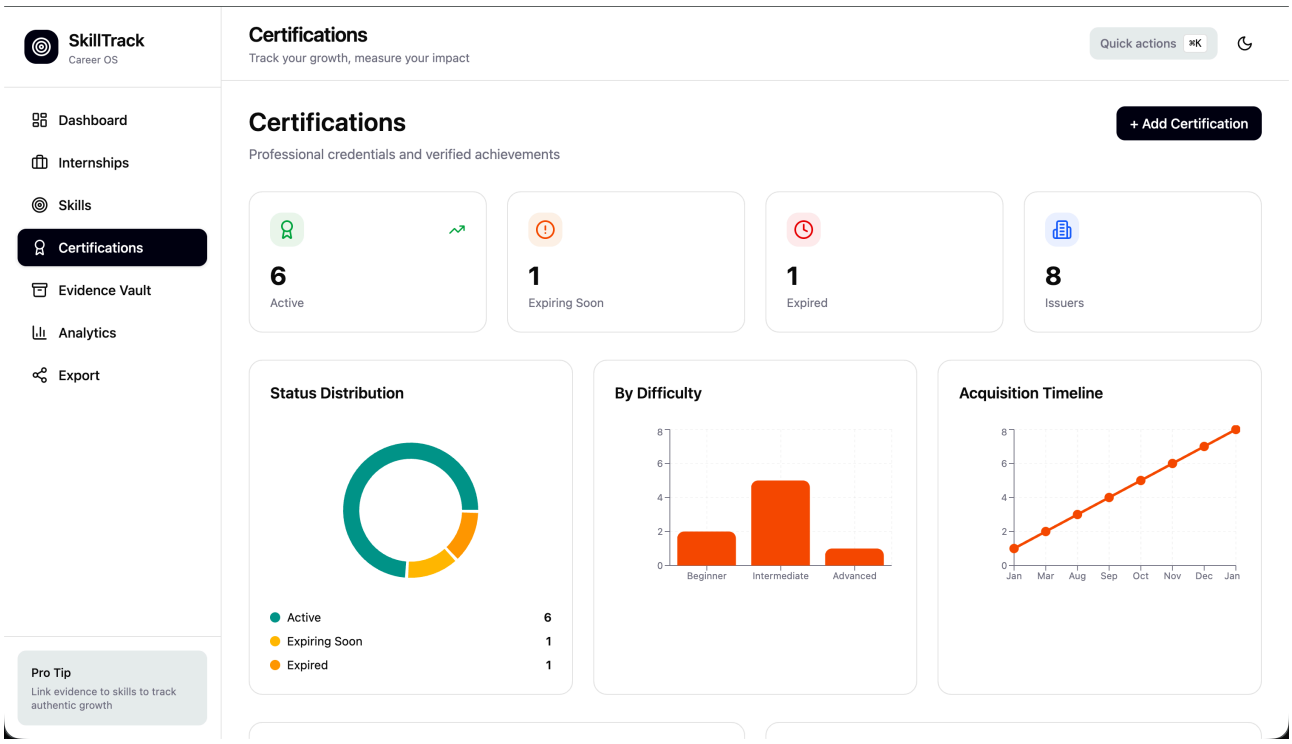
9. 
9. Add a skills graph in skills section. The graph must represent no. of skills on y-axis and timeline on x-axis.

   whenever the cursor is hovered over a node, it must show

   a. no. of skills at that respective time

   b. Newly learnt skills

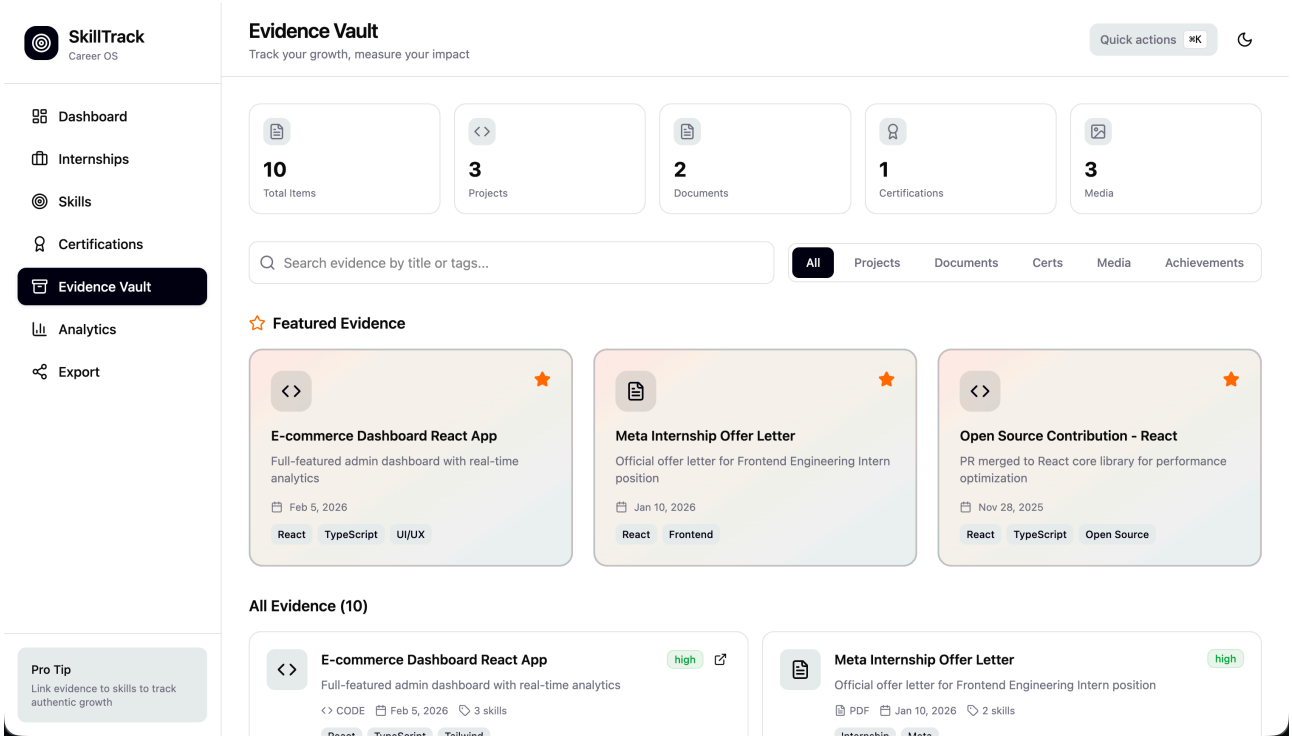
10. In certifications, in the status distribution graph, you must make the expired bar color red and the expiring soon, a orange color(not light not dark, intermediate as the one used for expired in below original graph)



11.

11. The acquisition timeline graph isn't needed, replace or remove it.
12. Make the certifications by default in chronological order. In the original design, they are random
13. Also it lacks a filter for different types of certifications.
    E.g.,
    a. expired , expiring soon, active
    b. By difficulty
    c. Sort by

14. In the evidence vault section, the search bar and filters must be positioned below "Featured Evidence" area.



15.

15. Also there is no option to star the evidence, which is needed for the evidence to be featured in Featured Evidence area.
16. It also lacks the textual clarity of respective evidence. It's optimal to mention what kind of evidence it is, here only the logo is mentioned.

17. In analytics section, the graph design is not consistent. 2 lines have nodes and the other doesn't have a node design. Also the internship bars are barely comprehensible.

18. 
18. In the above radar chart, the metrics here have changed from what was used in dashboard's radar chart. There each hexagon layer was 20 units, here it is 25 units. better to maintain same consistency throughout the webpage.
